

FIG. 1

Nucleic Acid Sequences

A. predicted cDNA sequence of AtFtn2 (SEQ ID NO:1)
(synonym: At5g42480; synonym: *ARC6*) gene

Sequence length = 2406 nt

Start codon (ATG) is at position 1-3

Stop codon (TAA) is at position 2404-2406

TITLE Direct Submission

JOURNAL Submitted (18-AUG-1998) Yasukazu Nakamura, Kazusa DNA Research
Institute, Department of Plant Gene Research; 1532-3, Yana,
Kisarazu, Chiba 292-0812, Japan (E-mail:ynakamu@kazusa.or.jp,
Tel:81-438-52-3935, Fax:81-438-52-3934)

COMMENT Address for correspondence: kaos@kazusa.or.jp
For the latest information on annotation of this clone, please
see
http://www.kazusa.or.jp/kaos/cgi-bin/agd_graph.cgi?c=MDH9
Genes with similarity to proteins in the databases are
described in
'product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
<http://compbio.ornl.gov/Grail-1.3/>),
GENSCAN (Chris Burge, MIT, <http://CCR-081.mit.edu/GENSCAN.html>),
NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark, <http://www.cbs.dtu.dk/services/NetGene2/>) and
SplicePredictor (Volker Brendel, Stanford University,
<http://gremlin1.zool.iastate.edu/cgi-bin/sp.cgi>).
Genes encoding tRNAs are predicted by tRNAscan-SE
(Sean Eddy, Washington University School of Medicine, St.
Louis,
<http://genome.wustl.edu/eddy/tRNAscan-SE/>).

FIG. 8 continued 5/110

This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions.

The 5' clone is K5J14 and the 3' clone is K16E1.

TITLE Direct Submission

JOURNAL Submitted (21-MAR-2002) Plant Gene Expression Center, 800
Buchanan
Street, Albany, CA 94710, USA

COMMENT RIKEN Genomic Sciences Center (GSC) members carried out the
collection and clustering of RAFL cDNAs (RAFL cDNA : 'RIKEN
Arabidopsis Full-Length cDNA'): Seki,M., Narusaka,M.,
Ishida,J.,
Satou,M., Kamiya,A., Sakurai,T., Carninci,P., Kawai,J.,
Hayashizaki,Y. and Shinozaki,K.

The Salk, Stanford, PGEC (SSP) Consortium members carried out
the
sequencing and annotation of the RAFL cDNAs: Yamada,K.,
Banh,J.,
Chan,M.M., Chang,C.H., Chang,E., Dale,J.M., Deng,J.M.,
Goldsmith,A.D., Lee,J.M., Onodera,C.S., Quach,H.L., Tang,C.C.,
Toriumi,M., Wu,H.C., Yamamura,Y., Yu,G., Bowser,L., Chen,H.,

FIG. 8 continued 9/110

Cheuk,R., Jones,T., Karlin-Neumann,G., Kim,C., Lam,B., Lin,J.,
Meyers,M.C., Miranda,M., Nguyen,M., Palm,C.J., Shinn,P.,
Southwick,A., Davis,R.W., Ecker,J.R. and Theologis,A.

Yamada,K. (SSP/PGEC) and Seki,M. (RIKEN GSC) contributed
equally to
(SSP/PGEC) this work. Shinozaki,K. (RIKEN GSC) and Theologis,A.
contributed equally to this work as PIs.
Method: conceptual translation.

LIBRARY

Lib Name: A. thaliana, Columbia Col-0, rosette-2
Organism: Arabidopsis thaliana
Cultivar: Columbia Col-0
Tissue type: rosette
Develop. stage: 4 - 7 weeks
Vector: pSPORT
R. Site 1: NotI
R. Site 2: SalI
Description: cDNA library was derived from untreated rosette tissue from Arabidopsis thaliana, Columbia Col-0, at 4 - 7 weeks.

Plants

were grown in 1:1:1 peat moss/vermiculite/perlite soil at
22 deg. C +/- 3 deg. C under constant light, and watered with
fertilizer. cDNA synthesis was initiated using a
NotI-oligo(dT) primer. Double-stranded cDNA was blunted,

FIG. 8 continued 11/110

selected, ligated to SalI adaptors, digested with NotI, size-
and cloned into the NotI and SalI sites of the pSPORT
vector.

ccu@resgen.com

LIBRARY

Lib Name: Gm-r1030
Organism: Glycine max
Lab host: DH10B
Vector: pSPORT1
R. Site 1: SalI
R. Site 2: NotI

Description: This cDNA library was constructed from mRNA isolated from immature cotyledons of greenhouse grown plants (individual seed fresh weight of 100-300mg). The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a NotI restriction site.

SalI linkers adapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSPORT1 vector. The ligated cDNA fragments were transformed into E. coli ElectroMax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna. Note that Gm-r1030 is a re-rack of Gm-c1007.

5 prime sequence

LIBRARY

Lib Name: potato stolon, Cornell University
Organism: Solanum tuberosum
Cultivar: Bintje
Tissue type: axillary buds of stem explants, swelling stolons
Develop. stage: 1 to 3 days
Lab host: SOLR
Vector: pBlueScript SK(-)
R. Site 1: EcoR1
R. Site 2: Xho1
Description: RNA was supplied by Christian Bachem & Beatrix
Horvath(Laboratory of Plant Breeding, Dept. of Plant

FIG. 8 continued 21/110

Sciences, Wageningen University, The Netherlands). Total
RNA was isolated from developing axillary buds of potato nodal
stem cuttings cultured on medium for the introduction of
tuber formation as described in Bachem et al. (Plant
Journal 1996). Tissue samples were taken of stages corresponding to
growing stolons and the early stages of tuber formation.

LIBRARY

Lib Name: Wheat cold-stressed seedling cDNA library
Organism: Triticum aestivum
Cultivar: Chinese Spring
Tissue type: Seedling
Develop. stage: Five-day old seedling
Lab host: E. coli SOLR
Vector: Lambda Uni-ZAP XR, excised phagemid
R. Site 1: EcoRI
R. Site 2: XhoI
Description: Seeds were surface-sterilized, germinated and grown aseptically in the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered crystallization dishes. Five-day old seedlings were

FIG. 8 continued 31/110

tissue,
was
OD

transferred to 5 C cold room and kept for 48 hr. The
total RNA, and poly(A) RNA were prepared, a cDNA library
made, and the cDNA clones were in vivo excised to give
pBluescript phagemids in the TJ Close lab (Choi, Close,
Fenton) at the University of California, Riverside. Plasmid
DNA preparations and DNA sequencing were performed in the
Anderson lab (all other authors).

LIBRARY

Lib Name: Hordeum vulgare spike EST library HVcDNA0012 (Fusarium infected)
Organism: Hordeum vulgare
Cultivar: Morex
Tissue type: Spike
Lab host: TJC121
Vector: pBluescript SK(-)
R. Site 1: EcoRI
R. Site 2: XhoI
Description: Plants were grown at the University of Minnesota in the GJ Muehlbauer lab; spikes were harvested and snap frozen at 0, 1, 2, 3, 4, 5, 6, and 8 days after Fusarium graminearum inoculation (Heinen). In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool; equal quantities of all eight RNA pools were

FIG. 8 continued 35/110

combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Choi, Fenton, Malatrasi). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see <http://www.genome.clemson.edu/projects/barley>. To order this clone see <http://www.genome.clemson.edu/orders> Also see Close TJ, Wing R, Kleinhofs A, Wise R (2001) Genetically and physically anchored EST resources for barley genomics. LIBRARY

Lib Name: Ovary 1 (OV1)
Organism: Sorghum bicolor
Organ: Mix of ovaries of varying immature stages from 8-week-old plants
Vector: pBluescript II from Lambda Zap II
R. Site 1: XhoI
R. Site 2: EcoRI
Description: The library was made from poly-A RNA in the cloning vector lambda ZAP II. Clones to be sequenced were prepared by mass excision.

LIBRARY

Lib Name: 952 - BMS tissue from Walbot Lab (reduced rRNA)
Organism: Zea mays
Cultivar: BMS (Black Mexican Sweet)
Tissue type: suspension culture
Develop. stage: mixed logarithmic and stationary growth phases
Lab host: DH10B
Vector: pUC19
R. Site 1: EcoRI
R. Site 2: EcoRI
Description: The library was prepared by George Rudenko using poly (A) selected RNA and Universal Riboclone cDNA Synthesis System (Promega). cDNA was synthesized using both random and oligo(dT) primers in separate reactions and equipped with EcoRI adaptors. Library was size-fractionated on agarose gels (for insert size >400bp) and non-directionally cloned into EcoRI-digested pUC19 vector. Blue/white selection on carbenicillin-containing plates was used to recover

positive

clones.

COMMENTS

Libraries were constructed by Dr. Stavros Bashiardes as
part
of the Physcomitrella EST program (PEP) at the Univ. of
Leeds (UK) and Washington Univ. in St. Louis (USA) DNA
sequencing by: Washington University Genome Sequencing
Center For information on obtaining a clone please contact:
Celia Knight (c.d.knight@leeds.ac.uk)

LIBRARY

Lib Name: Moss EST library PPN
Organism: Physcomitrella patens
Tissue type: protonemata: 7 day old tissue auxin treated
Lab host: DH10B
Vector: pBluescript SK-
R. Site 1: EcoRI

FIG. 8 continued 53/110

R. Site 2: XhoI
Description: Construction of the cDNA library was carried out using Stratagenes 'UniZAP - cDNA synthesis kit'. cDNA was constructed using an oligo dT primer/linker that contains a XhoI site within it. Following ds cDNA synthesis, EcoRI adapters were ligated to the blunt ends and sample was digested with XhoI. The result is cDNA with an EcoRI sticky end on one side and a XhoI sticky end on the other. This cDNA was ligated directionally in UniZAP arms. The vector is designed containing the pBluescript sequence as well as lambda DNA and cDNA is cloned within this pBluescript sequence. The vector was then packaged using Gold gigapackaging extracts. Library was grown in XL1Blue MRF' cells and amplified. The library was excised by mass excision using Stratagens 'Mass excision kit' that uses exassist as a helper phage that releases the pBluescript sequence and circularises it as single stranded plasmids that are then packaged (by helper phage) and secreted out of the host cell as phagemids. SOLR cells were transformed with phagemids and the library was plated out on LB-amp plates to select for transformants. Approximately 1,000,000 colonies were grown and recovered. The double stranded plasmid library was recovered by using Quiagen Midi prep kit. 2 micro grams of each library were used to transform DH10B cells by electroporation.

TITLE Direct Submission

JOURNAL Submitted (11-JAN-2002) Plant Gene Expression Center, 800 Buchanan Street, Albany, CA 94710, USA

COMMENT RIKEN Genomic Sciences Center (GSC) members carried out the collection and clustering of RAFL cDNAs (RAFL cDNA : 'RIKEN Arabidopsis Full-Length cDNA'): Seki,M., Narusaka,M., Ishida,J., Satou,M., Kamiya,A., Sakurai,T., Carninci,P., Kawai,J., Hayashizaki,Y. and Shinozaki,K.

The Salk, Stanford, PGEC (SSP) Consortium members carried out the sequencing and annotation of the RAFL cDNAs: Yamada,K., Banh,J., Chan,M.M., Chang,C.H., Chang,E., Dale,J.M., Deng,J.M., Goldsmith,A.D., Lee,J.M., Onodera,C.S., Quach,H.L., Tang,C.C., Toriumi,M., Wu,H.C., Yamamura,Y., Yu,G., Bowser,L., Chen,H.,

FIG. 8 continued 77/110

Cheuk, R., Jones, T., Karlin-Neumann, G., Kim, C., Lam, B., Lin, J., Meyers, M.C., Miranda, M., Nguyen, M., Palm, C.J., Shinn, P., Southwick, A., Davis, R.W., Ecker, J.R. and Theologis, A.

Yamada, K. (SSP/PGEC) and Seki, M. (RIKEN GSC) contributed equally to this work. Shinozaki, K. (RIKEN GSC) and Theologis, A. (SSP/PGEC)

contributed equally to this work as PIs.

Method: conceptual translation.

TITLE Direct Submission

JOURNAL Submitted (10-JAN-2002) The Institute for Genomic Research, 9712 Medical Center Dr, Rockville, MD 20850, USA, cdtown@tigr.org

COMMENT PROVISIONAL REFSEQ: This record has not yet been subject to final NCBI review. The reference sequence was derived from AE102093. On Jan 30, 2002 this sequence version replaced gi:15228160. Address all correspondence to:at@tigr.org

Gene Genes were identified by a combination of several methods:

Borodovsky, prediction programs including Genscan+ (Chris Burge, <http://CCR-081.mit.edu/GENSCAN.html>), GeneMarkHMM (Mark

variant <http://genemark.biology.gatech.edu/GeneMark/>), GlimmerA (a of GlimmerM, see Mihaela Pertea, http://www.tigr.org/softlab/glimmerm_hm/glimmerm.html, and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TIGR (<http://www.tigr.org/tdb/tgi.shtml>). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, <http://genome.wustl.edu/eddy/tRNAscan-SE/>).

FIG. 8 continued 79/110

Simple repeats are identified by repeatmasker (Arian Smit,
<http://ftp.genome.washington.edu/RM/RepeatMasker.html>).

COMMENTS

This EST was generated by sequencing from the 3' end of the
clone. Sequences have been trimmed to remove vector
sequence
and low quality sequence with phred score less than 20.

LIBRARY

Lib Name: Triticum monococcum early reproductive apex cDNA library
Organism: Triticum monococcum
Cultivar: DV92
Tissue type: Early reproductive apex
Develop. stage: Seven week-old plants
Lab host: E. coli XL0LR
Vector: Lambda Uni-ZAP XR, excised phagemid
R. Site 1: EcoRI
R. Site 2: XhoI
Description: The tissue, total RNA, and poly(A) RNA were prepared from

FIG. 8 continued 92/110

apex at double-ridge stage to terminal-spikelet stage
during transition from vegetative state to flower state, a cDNA library was made, and the cDNA clones were in vivo excised at the University of California, Davis (V. Echenique, B. Stamova, J. Dubcovsky). Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors).

LOCUS BU889000 460 bp mRNA linear EST 17-OCT-2002

DEFINITION P015D07 Populus petioles cDNA library Populus tremula cDNA 5 prime,

mRNA sequence.

ACCESSION BU889000

VERSION BU889000.1 GI:24100065

KEYWORDS EST.

SOURCE Populus tremula

ORGANISM Populus tremula

Eukaryota; Viridiplantae; Streptophyta; Embryophyta;

Tracheophyta;

Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;

rosids

; eurosids I; Malpighiales; Salicaceae; Populus.

REFERENCE 1 (bases 1 to 460)

            /note="Vector: pBRcDNASfiAB; The library was constructed
            from 10 different sources of RNA from a single genotype.
            Separate cDNAs were generated using primers that
            incorporated unique 5' and 3' tags to distinguish each
            source of RNA. cDNAs were then pooled, size-fractionated,
            directionally cloned into a custom medium-copy vector and
            transformations made with four size classes to minimize
            size bias. Details of each source of RNA and library
            construction can be obtained at <A href="http://cgpdb.ucdavis.edu/">

/clone="GENOME SYSTEMS CLONE ID: Gm-c1027-5036"
/tissue_type="cotyledons of 3- and 7-day-old Williams
seedlings"
/lab_host="DH10B"
/clone_lib="Gm-c1027"
/note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2:
XhoI; This cDNA library was constructed from mRNA isolated
from cotyledons of 3- and 7-day-old Williams seedlings
which were propagated on paper towels with distilled
water. The cotyledons were flash-frozen in liquid
nitrogen, then lyophilized for 72 hours. Unequal amounts
of mRNA was used for cDNA synthesis. Stratagene's cDNA
Synthexix Kit (catalog number 200401) was used to
synthesize the cDNA. First- stranded synthesis was
performed with 5-methyl dCTP, hence the ligated cDNA was
hemimethylated. A modification of Stratagene's
first-strand synthesis primer was used. An anchor
nucleotide (V=A, C, or G) was added to the 3' end of the
primer [GAGAGAGAGAGAGAGAGAGAACTAGTCTCGAG(T)18] to anchor
the primer at the 5' end of the poly(A) tract. After
second- strand synthesis, the cDNA ends were filled in
with cloned Pfu DNA, ligated to EcoRI adapters and
subsequently phosphorylated. The XhoI site within the
first-strand synthesis primer was then restricted by
digestion with XhoI; all XhoI sites in the cDNA would be
protected by their hemimethylated status. The cDNA
constructs were size-fractionated with a 500 bp cutoff,

Fig. 27, continued 4/6

using GibcoBRL Life Technologies' cDNA Size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript(tm) II XR Predigested vector (pBluescript II SK(+)) that has been digested with EcoRI and XhoI, and phosphorylated by Stratagene). 97% of the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n=30). This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."

LOCUS BI136291 521 bp mRNA linear EST 31-DEC-2001

DEFINITION F066P17Y Populus flower cDNA library Populus balsamifera subsp. trichocarpa cDNA, mRNA sequence.

ACCESSION BI136291

VERSION BI136291.1 GI:18017219

KEYWORDS EST.

SOURCE Populus balsamifera subsp. trichocarpa

ORGANISM Populus balsamifera subsp. trichocarpa

Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots; rosids
; eurosids I; Malpighiales; Salicaceae; Populus.

Fig. 27, continued 6/6
